ROAD TRAFFIC INCIDENTS – OCTOBER 2026

During the month of October 2026, a total of 1834 emergency service requests related to traffic incidents were recorded and 2253 patients were assisted.

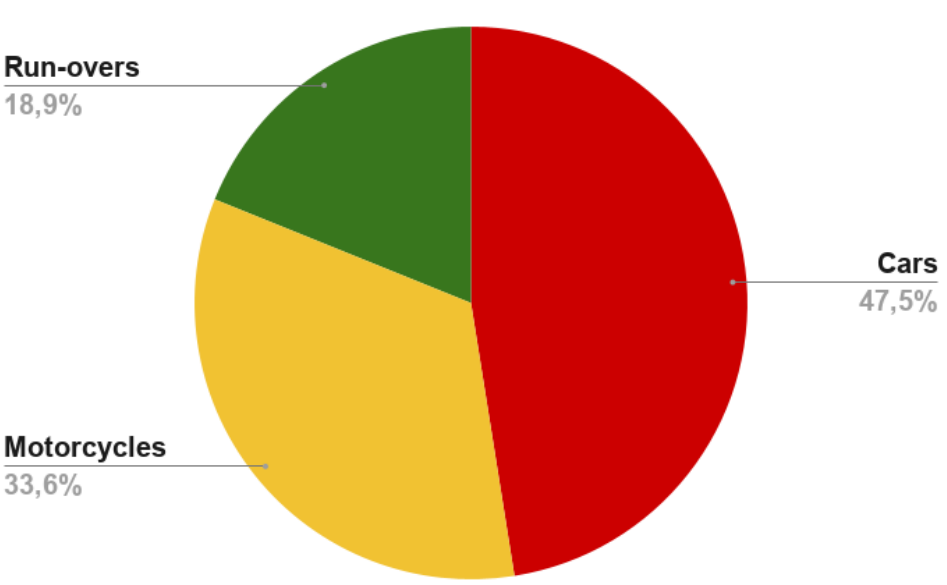

The most frequent type of incident was car-motorcycle collisions (27,92%), followed by motorcycle falls (9,99%) and pedestrian run-overs (9,59%), while car-to-car collisions rank fourth (8,52%) (Figure 1)

F 1

Of the total recorded incidents, those involving cars accounted for 1152 cases (47,5%), followed by passenger motorcycles with 816 cases (33,6%), while pedestrian and cyclists run-overs represented 458 cases (18,9%). (Figure 2)

F 2

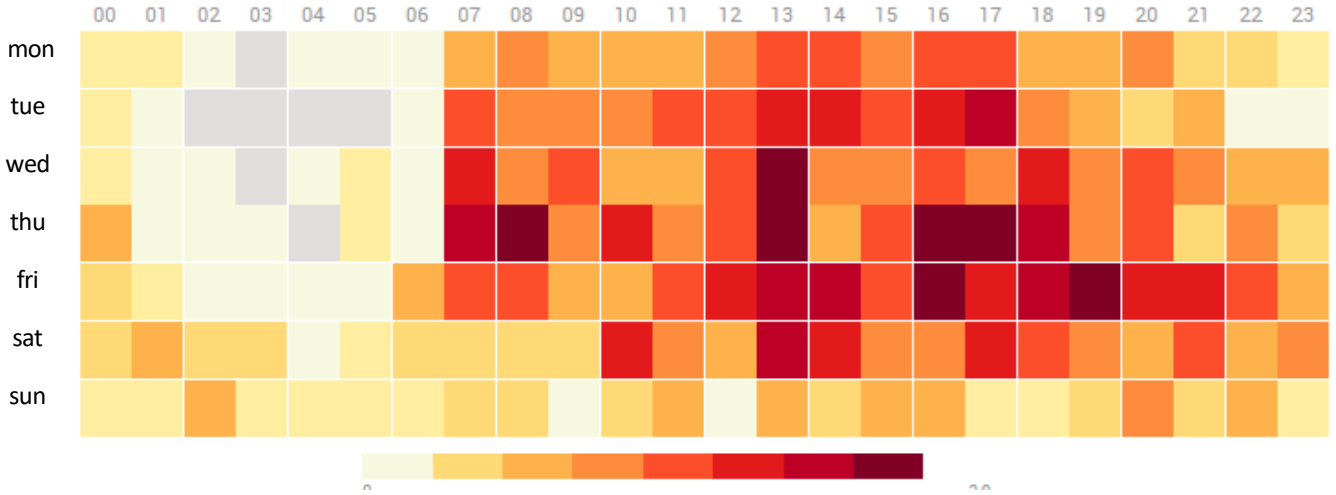

INCIDENT FREQUENCY BY DAY AND HOUR

The peak incidence of traffic incidents was recorded on fridays between 13h and 17h. This distribution on fridays during this period suggests a correlation with population dynamics during the month of October.

Data shown represent monthly averages considering day of the week, time of day, and incident frequency. (Figure 3)

Heat Map

- Minimum 0. Day: Mon. Hour: 03.
- Maximum 29. Day: Thu. Hour: 16.

INCIDENT MAP

The highest incidence of traffic incidents was observed in the following communes (administrative districts) of Buenos Aires City.

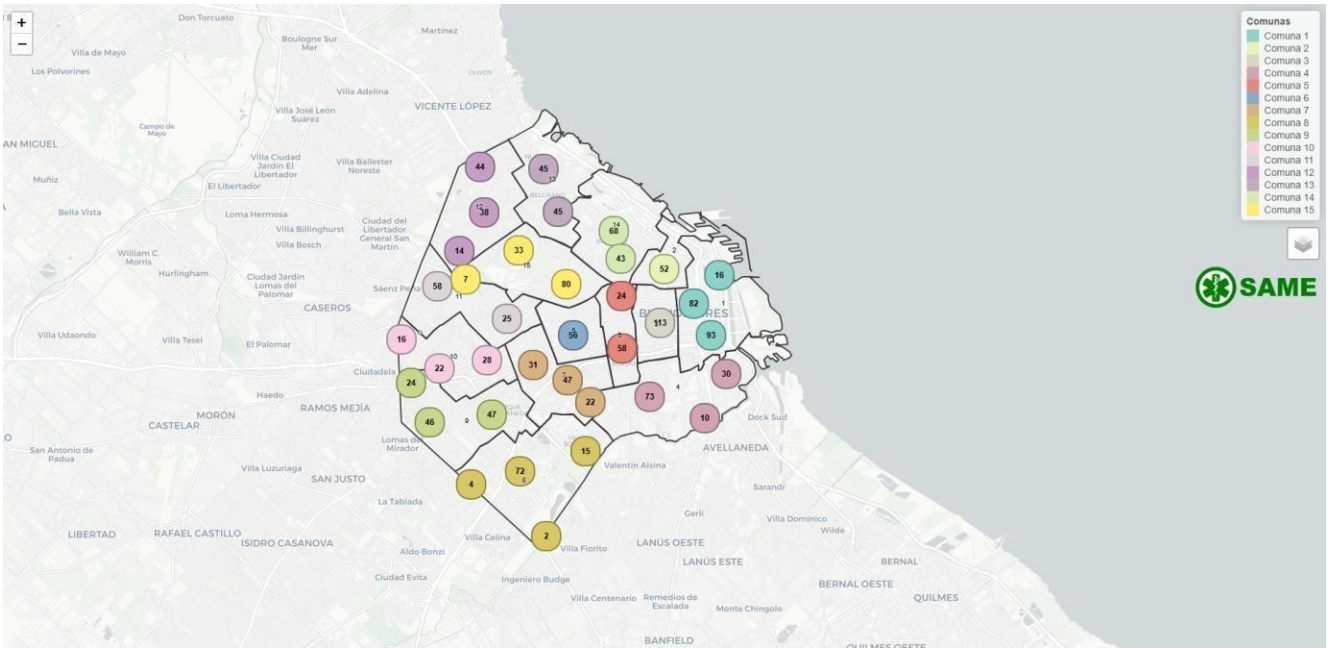

- Commune 1 (Retiro, Constitución, Monserrat, San Nicolás, Puerto Madero);
- Commune 4 (La Boca, Barracas, Parque Patricios y Nueva Pompeya);
- Commune 14 (Palermo);
- Commune 9 (Liniers, Mataderos y Parque Avellaneda);
- Commune 15 (Agronomía, Chacarita, La Paternal, Parque Chas, Villa Crespo, Villa Ortúzar);
- Commune 12 (Coghlan, Saavedra, Villa Urquiza, Villa Pueyrredón).

INTERACTIVE MAP

This interactive map illustrates traffic incidents recorded during the month of October. It was developed using geospatial data sourced from the Integrated Public Safety System (SISeP), comprising road incidents occurring between October 1 and October 31, 2026.

User Instructions

Upon opening the link, a map of the Autonomous City of Buenos Aires (CABA) will be displayed, divided by districts (Comunas). Within each district, circles are grouped containing a number that indicates the total count of traffic incidents within that radius during the 2026 period. The color of each circle varies according to its corresponding district.

Using the “+” and “–” zoom buttons located in the upper-left corner, users can zoom in or out of the map. As the zoom level increases, the information is disaggregated into smaller radii, allowing for the visualization of incidents down to specific street intersections. (Figure 5)

F 5

The colorimetric reference for incidents by district (Comuna) is located in the upper-right corner (indicated by the yellow box), with the map layers icon positioned directly below it (blue box). Hovering the cursor over this icon will display a list of available layers. Layers currently visible on the map are those with a blue checkmark. To hide specific districts or boundary lines, uncheck the corresponding box by clicking the square to the left of the desired option.

By clicking on the colored circles, the map will automatically zoom in to the radius of the selected incidents. This process can be repeated to achieve a higher level of detail, eventually displaying incidents along specific street layouts. Clicking on an individual incident will open its specifications, detailing the incident type, medical transport status (traslado), and geographic coordinates. (FigurE 6)

DATA REPRODUCIBILITY

The data used in this report were obtained from the Integrated Public Safety System (Sistema Integral de Seguridad Pública - SISeP), covering the period from October 1st, 2026, at 00:00 h to October 31th, 2026, at 24:00 h. The analysis was conducted by applying the specific filters for "vehicle collision", “Vehicule fall” and "run-over," while excluding all associated events. No additional filters were applied to the dataset to ensure the reproducibility of these findings.
